This wall mounted kiosk is ideal for any customer facing environment. Made in sturdy steel it will look good in any front of house situation and can be easily branded to suit your needs. The kiosk houses a small form factor PC that uses solid state technology giving it a high level of reliability. The kiosk is powered via a single external power lead with multiple power sockets. The case has a lockable front panel that easily opens upwards by use of gas struts. These kiosks have proved to be highly successful in environments that have a limited amount of floor space.
